DI 2.0 v1.1 • Reliability Phase 1

grow revenue next quarter

"How should we grow revenue next quarter using marketing_spend and discount_pct as controllable levers, segmented by region and channel, while keeping gross_margin_pct above 30% and return_rate_pct below 4%?"

Prepared: May 13, 2026, 11:34 PM

OBSERVATIONAL RELIABILITY BOUNDARY

This workspace is currently restricted to **observational analysis**. Simulation, optimization, and autonomous decisioning are disabled in this runtime to ensure output integrity.

This workspace is anchored on the objective 'grow revenue next quarter'. Candidate levers include discount_pct, marketing_spend, channel mix. Hard guardrails include Protect return_rate_pct.

Temporal dimension: date (month)

Scoping Intelligence

- Included revenue as the objective anchor metric.
- Included discount_pct because it is directly bound to the lever 'discount_pct'.
- Included marketing_spend because it is directly bound to the lever 'marketing_spend'.
- Included channel because it is directly bound to the lever 'channel mix'.
- Included return_rate_pct because it is directly bound to the constraint 'Protect return_rate_pct'.
- Included region as a comparison dimension compatible with revenue.
- Time context was anchored on the latest

Protect return_rate_pcthard Limit
Condition: lte

observed change for revenue.

- Legacy decision-bundle diagnostics remain available through /api/decision/run but were not used to define this scoped workspace.
- Supplemental diagnostics were intentionally kept secondary so ranked dataset-wide signals do not replace the scoped decision model.

Assumptions

The decision should be interpreted within the 'Next quarter' horizon.

TIMEFRAME • MEDIUM MATERIALITY

Information Gaps

All required information resolved.

Engine Readiness Checklist

- ✓ Data Context Loaded
- ✗ Semantic Logic Active
- ✓ Business Goals Defined
- ✓ Structural Integrity Verified

HOW IT WORKS

The engine evaluates recent signals against your defined metrics, detects cross-field trends, and surfaces observational analysis based on statistical importance.

⚠ This decision frame is limited to **observational analysis**. Causal simulation and recommendation engines are currently unsupported.

Analyze Workspace

Workspace Analysis Summary

Scoped analysis is anchored on the current workspace definition. revenue increased by 6.8% between Feb 2026 and Mar 2026 within the scoped workspace (from 236000.0 to 252000.0). Secondary legacy signals were attached as additive evidence only.

This response is descriptive and scope-grounded. It is not a simulation or trade-off result.

Scoped Diagnostics

Supporting Observational Evidence (Legacy)

discount_pct decreased between Feb 2026 and Mar 2026

Signal Score: 42+

discount_pct moved from 0.085 to 0.075 (11.8%) between Feb 2026 and Mar 2026. This is treated as a volume metric with avg aggregation.

marketing_spend increased between Feb 2026 and Mar 2026

Signal Score: 37+

marketing_spend moved from 40500.0 to 44500.0 (9.9%) between Feb 2026 and Mar 2026. This is treated as a total metric with sum aggregation.

return_rate_pct decreased between Feb 2026 and Mar 2026

Signal Score: 35+

return_rate_pct moved from 0.0285 to 0.027 (5.3%) between Feb 2026 and Mar 2026. This is treated as a rate metric with avg aggregation.
